Subject: Re: quick question

Rich,

As per our phone conversation, the throughput numbers are dependent on the method type (SVOCs take the longest and have the most limited throughput due to extraction apparatus). Some methods have little to no sample prep and can be analyzed quickly, which allows more samples per week. If you go with 20 per week we can meet the quick turnaround times for the list of parameters identified in Section 10.0 of the Sampling Plan.

Cindy

Subject: quick question

I have a quick question I need to get answered for a brief I am sending to HQ momentarily:

What is the maximum number of samples we can send you a week for the Dimock project. This number will likely be the determinate factor in how fast we will be able to complete sampling.

Thanks
Rich
